

Central Configuration Training

Aligning your Galaxy has never been easier

Central configuration enables system administrators to easily set up and maintain Galaxy configurations across an entire facility. Using central configuration, you can change settings at any station and all nodes at your facility automatically download those changes.

During this online training session, we will discuss how central configuration helps you to ensure that all nodes have the most up to date information, and gives you control over which nodes receive the data. You will administer your system with greater efficiency and more accuracy than ever before.

You'll Learn:

- How to plan for the change from local to central configuration.
- How to work with different views on certain data maintenance options, enabling you to configure multiple records at one time.
- What happens when data is published and then downloaded to nodes.
- How to use database heartbeat and the system dashboard to monitor the status of each Galaxy node.
- Configuration options for node settings applying at the global, agency or node level.

This course is offered online using Microsoft Live Meeting and Skype VOIP audio service. To take full advantage of this training session, customers should use a broadband internet connection with connected microphone and speakers.

Prerequisite: Completion of System Administrator Essentials, or equivalent knowledge of Galaxy configuration.

Location: Online · Duration: Two Hours · Tuition: \$200
