

## ***Galaxy Point of Sale and CounterPoint:***

### **An Integrated, Flexible Retail Management Solution**

***Galaxy Point of Sale provides a consistent retail interface*** to your sellers across admission and food departments. It integrates seamlessly with CounterPoint, industry leading retail inventory software that offers a comprehensive back office solution to managing gift shops, retail outlets, and mobile carts at your venue.

Galaxy Point of Sale and CounterPoint team up to provide the tools you need to minimize stock shortages, maximize profitability, and make the daily process of managing your retail inventory effortless.

*With the CounterPoint inventory management module you can:*

- Easily Issue and Manage Purchase Orders**  
After a CounterPoint purchase order has been received by a vendor, the receiver can be automatically vouchered into Accounts Payable as an invoice. Accounting distributions done in CounterPoint are passed automatically into Accounts Payable along with invoice vouchers, so that your Accounts Payable is up-to-the-minute accurate.
- Track Receiving and Catalog Inventory**  
Print bar code labels for on-hand inventory or automatically as part of purchasing and receiving. Catalog inventory based on UPC codes to prevent additional tagging. For example, one barcode may indicate CASE, while another barcode indicates EACH. Use unique barcodes for each individual color and size combination for an item.
- Take the Guesswork Out of Running Your Business with Comprehensive Reporting**  
With comprehensive reporting functionality you'll know what your on-hand quantities are, you'll see customer and member purchasing patterns, and you'll understand which retail items sell the best.
- Quickly Open CounterPoint from Your Galaxy Menu**  
Quickly access inventory information without leaving Galaxy using Galaxy's External Call function. Simply add a CounterPoint button to the Galaxy menu, and inventory information is yours at the click of a button.
- Keep Up-to-date Sales and Inventory Data with Microsoft SQL Server Technology**  
Because Galaxy and CounterPoint use the same Microsoft SQL server platform, your inventory information will update automatically with each sale.
